Oil Transfer Systems
Doug Mickelson
7009 Sunnyside St
Horace, ND 58047

Doug,

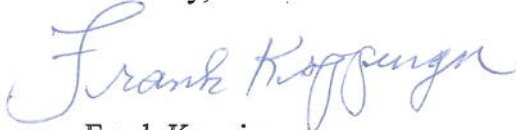

The Oil Transfer System has been a unique and invaluable tool for both in-shop and on-site use. It offers great flexibility for our current needs and changeability for our future needs.

This product, in every way, does what it is represented to do, achieving great (consistent) oil analysis test results from the specialized scrubber elements. Our oil analysis testing has proven that we are removing millions of particles of silica sand from each gallon of oil and the scrubber elements are still long lasting.

There is no doubt with today's replacement costs, parts, and labor this machine will save Fisher Sand & Gravel hundreds of thousands of dollars in the long term, keeping our equipment working much longer with far fewer breakdowns. We found this equipment quickly paid for itself and we highly recommend it and its use to anyone using heavy equipment or any business using any volume of oil.

We will be purchasing more Oil Transfer Systems in the near future.

Sincerely,

Frank Koppinger
Equipment Maintenance Supervisor
