**QUALITY
DRIVEN.**

After working with the Oil Transfer Systems recycling system we are very pleased with the results. It is a very economical, user friendly and durable solution to our filtering needs.

Some of the things we like about your system:

The filters are easy and economical to replace.

QUALITY

The drain pan is great to recover fluids from transmissions when the oil has to be drain and reused during a repair.

The machine produces consistent ISO results when fluid is sampled.

PARTNERSHIPS

The 27 gallon reservoir and metered dispensing gun work great to use in the field to service engines on multiple units.

The quick change filter heads are great when using multiple fluids during a service.

INTEGRITY

The system works great when cleaning up a contaminated system. Filter costs are about 25% of comparable unit.

Machine is very versatile to use because of its ability to work as a self contained unit or as a transfer unit with other containers or with the reservoir on the machine.

INNOVATION

We have received excellent customer service when our machine was damaged from a fall from service truck. The parts were sent out next day and the damage was very minimal.

This machine is used on a daily basis in our shop and has proven itself to be a very affordable, reliable recycling system.

TEAMWORK

Thank you for the great service we have received from your company.
