The Oil Transfer System has worked trouble free for a period of four to five years. With our two shops being side by side, being able to move the system back and forth is a great advantage. It's upright design and filter bank means we can roll around from one job and oil type to another.

In one small example of value, our two commercial air compressors used to use a drum of oil a year, this special oil was a cost of about \$1700 a drum. The words "instant payback" come to mind!

Also between both our shops we have recycled thousands and thousands of gallons of oil through our system with great lab results and low filter consumption.

We understand quality and workmanship, which is also reflected in the Oil Transfer System.
